

OMTG - Membership

Anyone interested in the design and construction of optical instruments and systems may join the Optomechanical/Instrument Technical Group (OMTG). There are no qualifications other than the member's own interest in the art of optomechanics and there are no fees for membership.

The principal activities of the Group are an annual evening meeting with a speaker followed by an open-forum "Problems and Solutions Workshop" and a biennial technical conference of 35 to 50 technical papers. Both activities occur during SPIE's Optics and Photonics Symposium during the summer months, usually in August and usually in San Diego, California.

Membership in the Group is established by the interested party sending his preferred email address to Al Hatheway, ah@ahinc.com, with a request to be added the membership roster. Similarly a member may end his membership by requesting his or her email address be removed.

Note: The chairman can make no guarantees about the security of individual email address information so individuals who wish to become or remain members of the Group should consider this before deciding to submit, continue or withdraw their membership (i.e. email address).
